

★ SKY@NIGHT

Create a brilliant night sky in your special room with high quality, easy-to-install sky@night star panels from ScreenScience...

- Custom lightweight acoustic star panels coated with black velour flock – a suede-like microfiber for maximum light absorption – panels themselves are practically invisible for a ‘deep space’ effect
- Approximately 30 fibre-optic “stars” per M² – starfield pattern is randomised and individual star brightness is varied based on a typical Australian night sky
- Simple plug and play installation, no electrical expertise - First panel connects to a 5v power adaptor from a standard power point. Then daisy chain one panel to the next
- Panels are only 20mm deep and attach directly to an existing ceiling.
- Fast installation (on average less than four hours)
- No mess - all panels are prefabricated and can be custom cut for each project
- Ideal for retro fit or where access to the ceiling cavity is difficult
- Random twinkling option available
- Flock velour surface also provides great sound damping features
